

RALS™ HEALTHSTREAM INTERFACE SIMPLIFIES OPERATOR DEVICE CERTIFICATIONS

RALS HealthStream Interface communicates seamlessly with RALS to update operator competencies.

The RALS HealthStream Interface is ideal for RALS users that use a HealthStream Learning Management System to update device certifications for operators.

The RALS HealthStream Interface communicates nightly with the cloud-based HealthStream System (Figure 1) to download competency information for recertification.

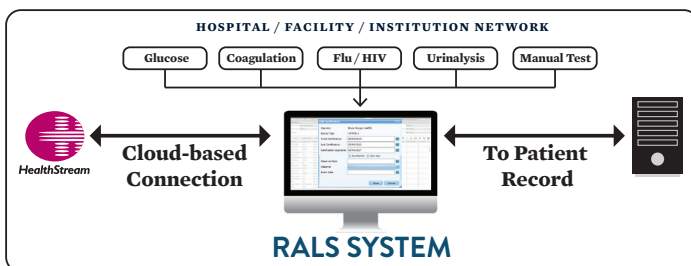

Figure 1: RALS interfaces to the cloud-based HealthStream System.

RALS queries HealthStream for device operator exam dates (Figure 2) which are then added to the operator record in RALS and used to verify whether or not the operator has passed a certification exam (Figure 3).

For more information please contact your RALS Informatics Executive.
