

New UI FAQ #7

How do I Add an Analyte to my Results Menu Data Table?

To add an analyte column in the **'RESULTS'** menu, you will need to:

1. Click on the configure  button
2. In the Columns tab, click the ADD  button and search for the analyte you would like to add... the available analytes will be specific to your RALS system
3. You can reorder columns by clicking the DRAG icon

next to the column and then dragging it to the desired order

4. After completing your column configuration, Click **Apply**  and the new column will be added to your data table
